A corporate law firm uses Lotus's cc:Mail to network its computing tasks, replacing dumb terminals with NetWare servers and an IBM token ring backbone network. LAN applications used include database, financial accounting, document and image management, and **customer billing** products. Shrink-wrapped products in use include 1-2-3, Quattro Pro, WordPerfect, and the ProComm communications package. Microsoft SQL Server and SuperBase manage data, and Cofax supports imaging. The time-saving imaging system runs on its own LAN, using vintage PC clones linked to a Compaq server. It eliminates task repetition, document copying, document loss, and document mismatches. E-mail supports communication among legal staff and clients alike, all of whom are connected via an Internet gateway or information service.

REVIEW TYPE: Product Analysis

GRADE: Product Analysis, No Rating

Some of the lesser-known features of WordPerfect 6.0 for DOS can be used to reduce the time required of an attorney to maintain time sheets and prepare bills to send to clients. A method is presented to automate time and expense recording, as well as bill creation, completely within WordPerfect. This can be created using WordPerfect's table feature, along with hypertext, hidden text, auto replacement, and some useful macros. The

speller's auto-replace function can expand abbreviations that are often used by attorneys to record time entries. Creating and formatting tables in WordPerfect must be learned, but once a table is created, it can be used as a template for future **client bills**. Sophisticated **spreadsheet** options create an **automated** invoicing system, and the table is integrated with the text portion of the **client invoice**. Hypertext options can allow the attorney to jump back and forth between previous bills for further examinations.

Order Entry System 7.0 supports multiple users in an online environment. The printed reports include order edits, product lists, **customer invoices**, order confirmations, sales analyses, sales tax reports, and shipping labels. The online screen displays include a query of a specific order; an inquiry by ship-to name; an inquiry of customer order history; and pop-up help windows. The free demo disk shows the user-friendly operational and control features of the system including laser printer support. The software can handle a customer deposit at the time an order is taken. It **calculates sales tax** based upon the item (for example, no sales tax for handling) and the customer (for example, no sales tax for resellers). The program can print comments on order confirmations and **customer invoices** and can provide credit checking against a predefined limit in the Customer Master Record.

PRODUCT NAME: Bottom Line Accounting 2000 (479977)

WindSoft International Inc (569992)
PO Box 692005
Orlando, FL 32869-2005 United States
TELEPHONE: (407) 355-0800

RECORD TYPE: Directory

CONTACT: Sales Department

Bottom Line Accounting 2000 (BLA2000) consists of General Ledger, Account Reconciliation, Financial Utilities, Accounts Receivable, Accounts Payable, Payroll, POS and Inventory modules. Users can purchase kits or run them as an integrated system. The general ledger module lets users set budgets, **compare** expenses, keep track of **tax** deductions, record all transactions, and **calculate** their net worth. Users can produce general journals, income statements, account lists, balance sheets, and budget listings by month, quarter, year, or year-to-date. Users can store unlimited transactions per year. The account reconciliation module runs with the general ledger module and enables users to balance bank statements, keep track of outstanding checks, verify charge card transactions, and produce automatic balance statements. The financial utilities module helps users make calculations, create a depreciation schedule for assets, and calculate loan payments. Users can produce loan amortization schedules and calculate present and future values of annuities. With the accounts receivable module, users can calculate finance charges, print **customer invoices**, statements, reports, and mailing labels and produce cash flow forecasts. Reports provided include accounts receivable journals, open-item statements, **customer invoices** and a schedule of receivables. The accounts payable module lets users maintain a permanent record of purchases and print checks, vendor lists, and mailing labels. Inventory and POS are suitable for retail stores and service industries. Payroll provides complete control of federal, state, FICS, FUTA, or SUTA. It prints 1099s, 941s, and W-2s. All modules integrate completely into the general ledger. The system is designed to be easy to install and requires little computer knowledge. No-month-end-closings are supported and errors can be easily corrected. After-the-fact accounting is allowed and pop-up, online help screens are featured.

TAX/PACK Professional 1040 is a complete 1040 tax preparation system designed for use by CPAs, tax practitioners or individuals to produce complete and accurate tax returns. It offers 1040, 1040A, 1040ES and 61 other forms and schedules plus extras such as Client Proforma with year to year transfer, Client Management, **Client Billing**, Cover Letters, Pop-Up- **Calculator**, Attachments, Loan Amortization, **Tax** Summary, Automatic Passive Loss, Mail Labels, Electronic Filing, Asset Tracking, Batch Printing and more. The system is menu driven and offers easy editing at any stage of return preparation. A question/answer format is followed with line numbers corresponding to the appropriate IRS line numbers. Data is entered once and passes automatically wherever it is required including the State option. Users can choose from 44 optional state modules. They can print returns in computer-generated formats.

REVIEW TYPE: Review

GRADE: A

Telecommunications Call Manager/400 (TCM/400), a call management product for the AS/400, monitors all incoming, outgoing, and station to station calls for call quantity, unauthorized use, and cost per call. The product interacts with the connected telephone switch and adds telecommunications cost data to a call record database. Costing is accomplished with referencing rates from the long-distance carrier, and **tax** is **calculated** with user-established **tax** tables. TCM/400 also charges calls to departments, using integrated **client billing** systems, if desired. TCM/400 is particularly adaptable to hospitality industry calling, with the ability to track guest calls and automatically add surcharges. The user can customize the product with maintenance screens, and reporting functions show calls by date, time, ownership, extension, and digits dialed. Other

Title: A fast way to deal with fares (computerised system)

Journal: Computer Systems vol.5, no.8 p.10

Publication Date: Aug. 1985 Country of Publication: UK

CODEN: COSYEG ISSN: 0264-4193

Language: English Document Type: Journal Paper (JP)

Treatment: General, Review (G); Practical (P)

Abstract: If you are a taxi driver, you collect the fare shown on the meter at the end of the journey, and that's that. As long as the day's takings correspond with the metered journeys, your accounts are as good as agreed. Not so if you are in the contract hire business, where 99% of your journeys are for account customers, and where each journey has to be painstakingly logged and the fare calculated to be invoiced at the end of the month. West One is an example of such a hire company. With a turnover approaching Pounds 5m, it has about 2000 account customers and carries out over 2000 journeys each day. Including weekend work this can mean up to 60000 trips per month to be noted, logged, calculated, collated and provided as accompanying documentation with **customers' accounts**. The company has installed a computerised system with an Accron microcomputer from Newtons Laboratories, a 30 Mbyte Winchester hard disk, a printer and two terminals. Software for the system includes Omicron's PowerSales and Power-Ledger with a program specially written for the 'docket-processing' which would interface with Power-Sales. The **ledger** packages themselves would **automatically** integrate with each other. Future software developments will include automatic fare pricing. (0 Refs)

QuickBooks gets the Office connection

Arar, Yarden

PC World, February 1, 1999, v17 n2 p80-81, 2 Page(s)

ISSN: 0737-8939

Company Name: Intuit

URL: <http://www.quickbooks.com>

Product Name: QuickBooks Pro 99

Languages: English

Document Type: Software Review

Grade (of Product Reviewed): B

Hardware/Software Compatibility: IBM PC Compatible

Geographic Location: United States

Presents a favorable review of QuickBooks Pro 99 (\$219, street, single-user; \$599, five-user pack), an upgrade to the small business accounting solution from Intuit (800). Features integration with Office 97, including automated letter-writing based on customer financial data, and Excel spreadsheet integration. Also features a built-in stopwatch for users who bill by the hour. Includes functions for filling out bank deposit slips, tracking cash, and attaching purchase orders to **customer accounts**. Notes that this version is a good option for those users who did not recently upgrade to Version 6.0. However, complains that for those who ha

recently upgraded, it may be a bit pricey, despite the extra rebates. Concludes that this is a good upgrade for current QuickBooks users. Includes one screen display, one photo, and one product summary. (kgh)

Back to Basics accounting: Peachtree's accrual system is a real asset for small businesses

Keller, Karl

Popular Computing , Jul 1985 , v4 n9 p106-110, 3 Pages

ISSN: 0279-4721

Languages: English

Document Type: Software Review

Geographic Location: United States

A very favorable review of Back to Basics, accounting software that costs \$395 for IBM PCs and compatibles and the Macintosh, and \$195 for Ataris, Apples and the Commodore 64 from Management Science America Inc. Says that this "menu-driven program can maintain detailed financial records, keep day-to-day track of a company's performance, forecast cash needs" and "monitor **customers ' accounts**". Suggests that it is powerful and reasonably priced. Contains one illustration.

REPORT SAYS GIROBANK SALE MAY BE PREMATURE

UK - REPORT SAYS GIROBANK SALE MAY BE PREMATURE

Independent (TI) 4 August 1988 p23

A confidential information memorandum on the Girobank sale issued by Schroders on behalf of the Post Office implies that the sale of Girobank is premature and will raise only GBP150-200 mil, less than would be possible if the bank were allowed to benefit from its modernisation programme over the next two years. The bank will have spent GBP22 mil on a **computerised customer account ledgering** and maintenance system, CALM, by the end of 1988, while it is estimated that a further GBP68 mil should be spent on computers over the next five years. Current profit is therefore affected by the cost of these programmes. The memorandum also shows that the client base of the bank has a larger proportion of the lower socio-economic classes and women than the other large clearing banks.

RapidTax -- Tax software gets better with age

Meadows, Laura Lou

PC Magazine , February 25, 1992 , v11 n4 p290, 298, 2 Page(s)

ISSN: 0888-8507

Company Name: DacEasy

Product Name: RapidTax

Languages: English

Document Type: Software Review

Grade (of Product Reviewed): c

Geographic Location: United States

Presents a mixed review of RapidTax (\$49.95), a tax preparation program from DacEasy Inc. of Dallas, TX (800). Runs on machines with 512MB of RAM, 4MB of hard drive space, and DOS 3.1 or later. Says RapidTax features mouse support, a wide range of forms and schedules, detailed worksheets, an Interview feature, a pop-up **calculator**, operational help screens, **tax** help windows, electronic filing, and **client billing**; but tax help is meager, and many two-keystroke commands are not onscreen. Also says the program d not do well in depreciation computation, underpayment penalty calculation, and passive losses. Includes a product summary, and a screen display. (tbc)

London Scottish Bank's recovery slowed by costs

UK: LONDON SCOTTISH BANK HINDERED BY COSTS

Financial Times (FT) 27 Jan 1999 p.30

Language: ENGLISH

The consumer credit operations of London Scottish Banks, has seen only a slow recovery as buoyant debt collection revenues pushed pre-tax profits to GBt 10.6mn. An aborted takeover bid led to a charge of GBt 223,000, and a change in the way group **tax** is **calculated** meant that net profits were held back to GBt 7.04mn. Bad debts at the company fell off 11% to GBt 3.1mn and the loan business appears to be moving slowly forward. **Customer accounts** rose to 163,900 up by some 20,000. Isis, the newly acquired factoring business produced a profit of GBt 373,000, while Robinson Way, the debt collection agency saw **customer accounts** rise by 19%. This in turn helped lift operating income to GBt 9.87mn. Tax charges are set to rise from 26% to 28%. A tax charge of GBt 634,000 was made to settle an Inland Revenue claim from 1996. The company may embark upon another acquisition venture at a later stage, but it seems likely that any takeover would not be in the field of collected credit. Table: London Scottish Bank Figures in GBt mn Current Change Operating Income 9.87 13% Pre-tax Profits 10.6 12% Net Profits 7.04 0.7%

ABSTRACT

PURPOSE: To improve the processing efficiency, by registering an account file of plural customers in advance and revising the account file of each customer in the lump, when payment-in and out takes place.

CONSTITUTION: When employees of a company subscribe to a group fixed amount accumulating deposit system, a processing request data I(sub 1) is outputted from a terminal device 1 to request the registration of a **customer account** in a processor 2. The data I(sub 1) comprises account numbers A-Z of customers a-z, number of items of customers C, incoming data E by customers and total monetary amount D of the incoming data. A receiving section 3 receiving the data I(sub 1) starts an account set section 4 to open a register file 8 and sets the account number A-Z to an account column (e) and the deposit amount per month determined by customers to a monetary amount column (f). Further, a managing file 9 is provided to set the number of items of customers and the total amount of money and a **ledger** file 7 is opened. When paying-in is done from each customer, the receiving section 3 starts a collecting section 5 with a processing request data I(sub 2) from the terminal device 1 to collates the data I(sub 2) with the data of the file 9, and when they are coincident, an incoming money processing section 6 is started for proceeding the incoming process.

Abstract (Basic): WO 200184389 A2

NOVELTY - The method for managing trade receivables credit and collection services using an accounts receivable system (10) coupled to a database (94) comprises the steps of : receiving (920) information from a client system (14) ; extracting (940) data from the information and loading (950) into the database.

DETAILED DESCRIPTION - The credit information pertaining to the customer is then received and credit is evaluated through an electronic scoring process. A payment is accepted against the **customer account** for processing and generating journal entries (462) to post on a client's general **ledger** (180) for financial monitoring, reporting and auditing purposes. An INDEPENDENT CLAIM is made for an accounts receivable computer program.

USE - Web-enabled Accounts Receivable System (ARS) for managing various related functions such as credit granting, collection and dispute management.

ADVANTAGE - The system includes five modules which include a Credit Inquiry Module, a Remittance Processing Module, an Accounts Receivable Claim Module, a Maintenance Module, and an Administration Module. These modules are integrated with each other and are capable of interfacing with a client's Order, Ship, Bill (OSB) system for smooth functioning. The ARS is further capable of automatically upgrading the software and systems templates to the client by downloading on a real time basis as they are being implemented at a central site and as called for by a user. The ARS's interface capabilities involve interfacing with the Order, Ship, Bill (OSB) system for credit approval and order processing. The ARS further provides several methods for exchanging trade payment and credit information with outside credit bureaus/sources. The ARS includes built-in methods for report extraction and creation to get the data required for particular situations or clients. Reports and files can be delivered using various methods such as file transfers, email, hard copy and web site access. The ARS provides a way of updating various data during a nightly batch process. Many file transfers and reporting procedures are also automatically done during the batch process.

DESCRIPTION OF DRAWING(S) - The drawing shows a process flowchart for the ARS.

Abstract (Basic): WO 9704411 A

The method for transferring (28) funds instantly to an account (30) such that the funds are available to the beneficiary at the time they are sent, involves using customer information (24) which can be automatically accessed by the system (20). The appropriate exchange rate and any fees to be charged to the account (26) are automatically computed and displayed to the user such that the user may authorise or cancel the transaction (22).

The user is also able to quantify the amount to be transferred in the currency of the originating account or the currency of the receiving account. Safeguards are provided to ensure that only authorised individuals have access to the accounts (32) and the funds,

and immediate verification of successful completion or failure is made to the customer.

USE - Performing money transfers between financial institutions for credit to general **ledger** or **customer accounts** , in real time and in secure manner.

ADVANTAGE - Enables user to quantify amount to be transferred in currency of originating account or of receiving account, to maximise system flexibility
